Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

 Claims 1-11, drawn to a method of strengthening a fire porous ceramic core, classified in class 427, subclass 133.

II. Claims 12-15, drawn to a fire porous ceramic core, classified in class 428, subclass 305.5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process such as spraying the core with an emulsion of water insoluble polymer instead of impregnating.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Edward J. Timmer on 02/05/2006 to request an oral election to the above restriction requirement, but did not result in an election being made.
